Rongqian Chen

215-730-6189 — rongqianc@gwu.edu — chenrongqian.com — Linkedin

Education

George Washington University (GWU) — **Washington, D.C., US**
PhD in Electrical and Computer Engineering (GPA: 3.70) — *Sept. 2024 – Now*

University of Pennsylvania (UPenn) — **Philadelphia, US**
MSE in Electrical Engineering (GPA: 3.82) — *Sept. 2021 – May 2024*

Southwest Jiaotong University (SWJTU) — **Chengdu, China**
BEng in Automation (GPA: 3.45) — *Sept. 2017 – Jun. 2021*

Technical Skills

Robot Learning: Reinforcement Learning, Imitation Learning, Supervised fine-tuning, self-supervised Learning, VLA, WAM
Simulation: MuJoCo, Isaac Sim, Gazebo, ROS2
Hardware: Unity, KiCad, Altium Designer, SolidWorks, Ansys, PSIM, STM32, FPGA, DSP, Raspberry Pi, Arduino
Programming: Python,PyTorch, C, C++, C#, CMake, Bash, Git, Verilog, Matlab, SQL

Research Experience

DAXO Robotics: 120-DOF Dexterous Hand — **May 2026 – Now**
Robotics Research Intern – DAXO Industries — *San Francisco, CA, US*

Hardware & Firmware

- Designed multiple revisions of **motor driver and communication PCBs** and **flexible PCB connectors** for a 120-DOF tendon-driven robotic hand in KiCad.
- Developed **STM32 firmware** for brushless motor drivers with **FOC control**, and built the full driver and control stack for real-time control of all 120 actuators.
- Performed **tendon-to-pose system identification** to map tendon actuation to finger joint poses.

Software & Robot Learning

- Built a **teleoperation data collection system**,**vision-based hand tracking** and **motion retargeting** for the 120-DOF hand to record synchronized demonstrations and maps human hand poses.
- Trained **imitation learning**& **reinforcement learning** policies in MuJoCo for **handwriting** with the tactile feedback high-DOF hand. Designed a **fine manipulation benchmark** in MuJoCo to evaluate performance.
- Fine-tuned and deployed the **GR00T N1.5** Vision-Language-Action (VLA) model on collected demonstrations.

Human-UAV Synergy System in Real-world Scenarios — **Sept. 2025 – Present**
Team Member – CHASE Project, GWU — *Washington, D.C., US*

- Designed and implemented a light weight VLA model and perception module on Jetson Nano Super GPU that deploy on the UAVs.
- Implemented a cooperative reasoning framework that infers human intent from observed behavior and turns high-level human instructions into mission goals and sequential plans based on perception data.
- Built **Isaac Lab and Gazebo** simulations of fire-hazard warehouse scenarios to evaluate UAV localization and validate sim-to-real flight trajectories.

World Models and Planning for Computer-Use Agents — **Oct. 2025 – Present**
Core Researcher – GWU — *Washington, D.C., US*

- **LatentCUA:** Developing a **latent-space world model** for GUI space that rolls out multi-step action plans in latent space for **MPC-style** plan verification.
- **IntentScore:** Proposed an intent-aware action scorer trained on cross-OS trajectories; works as a plug-in harness with zero-shot cross-platform transfer.
- **Agent Alpha:** Built step-level **Monte Carlo Tree Search** with a custom alpha-UCT metric, comparison-driven evaluation and action chunking for long-horizon tasks.

ACDZero: Tree Search and RL for Automated Cyber Defense — **Jan. 2026 – Present**
Team Member – GWU — *Washington, D.C., US*

- Developed an autonomous defense agent that combines **Graph Neural Networks** with **Monte Carlo Tree Search** to learn policies in large, dynamic network environments.
- Used graph embeddings of network states for **value estimation and policy guidance**, enabling efficient search over massive action spaces.
- Outperformed RL baselines (**DQN, PPO**) in robustness and scalability on the **CAGE Challenge 4** benchmark.

Agentic AI for Autonomous Chip Physical Design **Dec. 2025 – Jan. 2026**
Core Contributor – GWU *Washington, D.C., US*

- Developed **OpenLayout**, an open-source multi-agent platform for VLSI physical design; five specialized agents (Planner, Worker, Debugger, Analyzer, Optimizer) produce DRC-clean, timing-closed layouts from gate-level netlists.
- Contributed to a **benchmark** for agents on commercial EDA tools at advanced nodes.

Tunable-Stiffness Actuators and Bio-inspired Robots **Nov. 2021 – July 2024**
Research Assistant – Sung Lab, GRASP, UPenn *Philadelphia, US*

- Designed and characterized a **pneumatic tunable-stiffness bellows actuator**.
- Used tunable leg stiffness to achieve **energy-efficient vertical hopping** in a monopedal robot across varying ground profiles.
- Design and control of a **tunable-stiffness coiled-spring actuator** for a flexible robot arm.
